# Roam Test

2021-07-01-00:42:56

Objective

This test uses the forced roam method to create and roam number of Wi-Fi stations between two or more APs with the same SSID on the same channel.

Test Setup Information

| Device Under Test	SSID	Number of 5Ghz Stations	Roam configuration repeat	Test Duration
WAX610 , WAC505	testroam	5	30	0:13:29

Total Roams - All Stations

The below graph shows the total number of success and failure roams for all the connected station within the test duration.

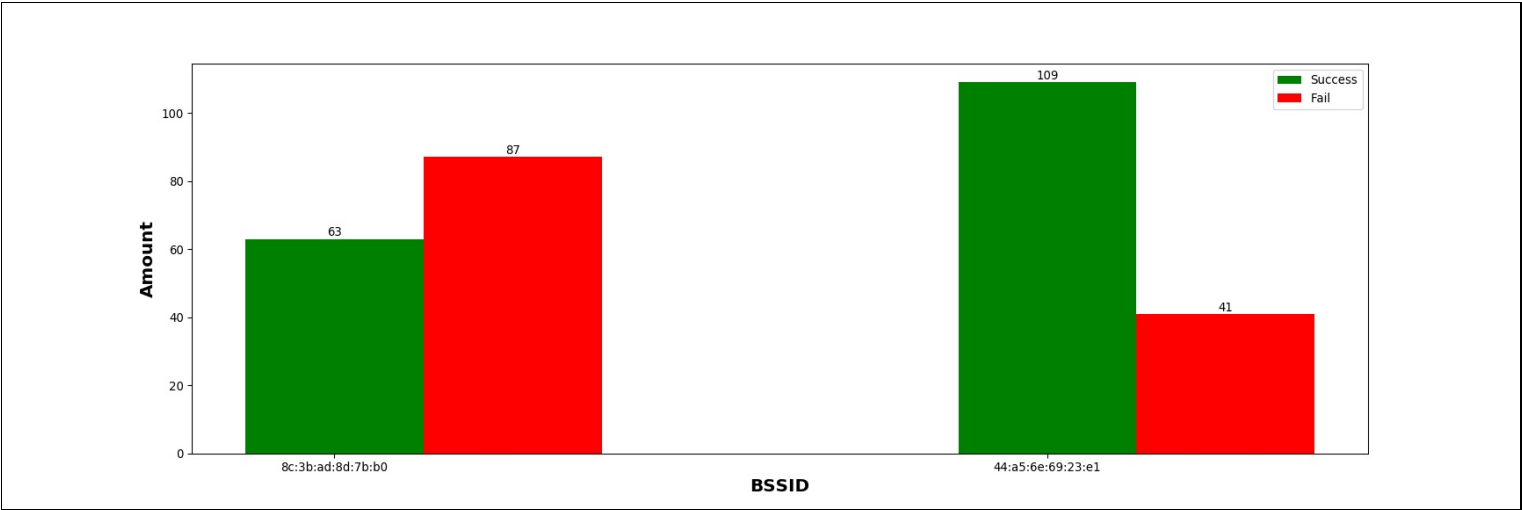

Success/Failure Roams - 5Ghz Stations

The below graph shows the number of success and failure roams for all 5GHz WiFi stations.

Success/Failure Roams - 5Ghz BSSID's

The below graph shows how many roams succeeded and fail on all 5Ghz BSSID's.
